Java Card□ Technology for Smart Cards [Book]

Java Card refers to a software technology that allows Java-based applications to be run securely on smart cards and similar small memory footprint devices.

Java Card is the tiniest of Java platforms targeted for embedded devices. Java Card gives the user the ability to program the devices and make them application specific. It is widely used in ATM cards.

The first Java Card was introduced in 1996 by Schlumberger's card division which later merged with Gemplus to form Gemalto. Java Card products

If you plan on doing javacard programming, you should also get to know Global Platform. It's a smartcard standard, and in the context of javacard, you'll need to know about the GP spec when you need to load and manage javacard applets. This is required for working with JCOP cards. For the latest GP spec search for GlobalPlatform Card Specifications. You'll need to be very familiar with basic smartcard concepts, e.g. APDUs.
