Category 1/2/3/4/5/6/7 – a specification
for the type of copper wire (most
telephone and network wire is copper) and
jacks. The number (1, 3, 5, etc) refers to
the revision of the specification and in
practical terms refers to the number of
twists inside the wire (or the quality of
connection in a jack). CAT1 is typically
used for telephone wire.

Thick coaxial cable is also referred to as thicknet. 10Base5 refers to the specifications for thick coaxial cable carrying Ethernet signals. The 5 refers to the maximum segment length being 500 meters. Thick coaxial cable has an extra protective plastic cover that helps keep moisture away from the center conductor.

Alternatively known as an Ethernet cable or LAN cable, a Cat 5 or category 5 is a network cable that consists of four twisted pairs of copper wire terminated by an RJ-45 connector. The picture shows an example of a Cat 5 cable. Cat 5 cable is used in home and business networks, providing data transmission speeds of up to 100 MB per second. The maximum recommended length of a Cat 5 cable is 100 ...
