- The primary reason for glycaemic control in the last hours to days of life is symptom control and avoidance of osmotic symptoms from hyperglycaemia, or symptoms of hypoglycaemia. Therefore, withdrawal of diabetes medications should be balanced against the patient's symptoms, and these should be assessed regularly as treatment is withdrawn. 7

Diabetes in the Last Hours and Days of Life November 2016

Type 2 diabetes treatment can include changes to diet, physical activity, weight loss (if indicated), oral medications, as well as insulin and non-insulin injectable medications. If a person has Type 2 diabetes and goes on to require insulin this does not mean they now have Type 1 diabetes.

Caring for someone with diabetes at the end of life

Access Free Last Days Of Diabetes

Diabetes is a lifelong condition that causes a person's blood sugar level to become too high. There are 2 main types of diabetes: type 1 diabetes - where the body's immune system attacks and destroys the cells that produce insulin; type 2 diabetes - where the body does not produce enough insulin, or the body's cells do not react to insulin; Type 2 diabetes is far more common than type 1.
