Lean, agile, resilient and green: divergencies and ...

The systematic analysis of the lean, green and resilient practices is expected to be of great value for their effective implementation by the automotive companies. The interpretive structural modeling approach is used as a useful methodology to identify inter-relationships among lean, green and resilient practices and supply chain performance and to classify them according to their driving or dependence power.

on supply ...

Lean SC practices appear as drivers for green and resilient SC practices and their impact on environmental performance is higher than that one of the resilient SC practices. In addition, analysis of the findings is especially valuable for practitioners that can gain knowledge on interactions between practices and their impact on environmental performance measures.

Design/methodology/approach - A conceptual model with lean, agile, resilient and green practices and supply chain management attributes is proposed. Causal diagrams were used to represent the relationships between paradigm practices and supply chain attributes. The four diagrams were aggregated to build the conceptual model.
