In archaeology, lithic technology includes a broad array of techniques used to produce usable tools from various types of stone. The earliest stone tools were recovered from modern Ethiopia and were dated to between two-million and three-million years old. The archaeological record of lithic technology is divided into three major time periods: the Paleolithic, Mesolithic, and Neolithic. Not all cultures in all parts of the world exhibit the same pattern of lithic technological development, and s

The raw material used by the Mesolithic communities on Lough Allen in their stone-working was dominated by chert followed by tuff, other non-specific volcanic types, siltstone/mudstone, flint, and a non-carboniferous chert; an axe of shale and one of basalt were also identified.

Although lithic raw material data suggest that Kirk groups were highly mobile (e.g., see this paper) the area of the "horizon" is much too large for it to be the product of a single group of people: the hunter-gatherers discarding Kirk points in Ontario are not the same individuals as those discarding Kirk points in Florida.

Traditional Knowledge and Lithic Resources

Archaeologists use the word lithic (from the Greek lithos meaning stone or rock) for materials and artifacts made from rocks or minerals.

Geologic nomenclature also makes extensive use of this Greek root, e.g., in lithification (the compaction and cementation of an unconsolidated sediment into a coherent, solid rock), lithology (the description of the characteristics of a rock, such as color, mineralogy, and grain size), and lithosphere (the solid portion of the

Mary Leakey (1967, 1971, 1975) was the first to consider systematically the impact of raw material on technological variation in the Olduvai ESA lithic assemblages, observing that so-called “ light duty ” tools (e.g., utilized flakes) and debitage tend to be flaked from quartz, quartzite, and chert, whereas volcanic rocks dominate the “ heavy duty ” tools (e.g., choppers, polyhedrons). She speculates (1967: 421) that this pattern “ probably indicates a deliberate selection of material ...
