A LogMAR chart, also called a Bailey-Lovie chart or an ETDRS chart, is a chart consisting of rows of letters that is used by ophthalmologists, orthoptists, optometrists, and vision scientists to estimate visual acuity. The chart was developed at the National Vision Research Institute of Australia in 1976, and is designed to enable a more accurate estimate of acuity than do other charts. For this reason, the LogMAR chart is recommended, particularly in a research setting. When using a LogMAR char

*LogMAR chart - Wikipedia*

The Snellen Chart (fig 1), which traditionally has been used to measure visual acuity, is easily recognised as one of the hallmarks of the ophthalmologists consulting room. This has been in use since 1862 and more recently a newer LogMAR (fig 2) chart has been introduced into clinical practice. Initially used as a research tool because it is more accurate than other acuity charts, this accuracy is also valuable in the clinical setting and many eye departments now use it routinely.

Visual Acuity Score (VAS) is an inversion of the logMAR scale, based on  $VAS=100-50xlogMAR$ . It is more intuitive since higher values indicate better visual acuity. In the scores review, score 100 in blue indicates the reference standard, scores above 100 in green indicates no myopia, while scores below 100 in red may indicate myopia.

The Visual Acuity Charts that follow Snellen format are tumbling E, Landolt C and regional language charts. The Visual Acuity Charts that follow logMAR format are ETDRS, Bailey- lovie charts, tumbling E and Landolt C. \*(Tumbling E and Landolt C are available in both formats. The only difference between ETDRS Visual Acuity Chart and Bailey lovie is the usage of Sloan letters (C, D, H, K, N, O, R, S, V and Z) in ETDRS chart.

### *How to construct a Visual Acuity Chart?*

Such charts may provide higher sensitivity and reliability of the measurement of visual acuity. LogMAR is the abbreviation of log (base 10) of the MAR (the angle created at the nodal point of the eye/ visual angle expressed in minutes). For statistical analysis, logMAR visual acuity is the best option.

### *Evaluation Of Visual Acuity Article*

Publisher Description These iPad-based logMAR visual acuity charts are based on the Bailey-Lovie Visual Acuity Chart. The test uses the same 10-letter set as the Bailey-Lovie chart. The ten letters appear in a random order and have been shown to have similar visibility.
