The thrust of Chapter 1, Machine design methodology, is the illustration of the processes to be used in identifying the most promising design solution from a given or derived set of candidate concepts. The key topics covered in this chapter are: the relative attractions and drawbacks of the "traditional" or "sequential" machine design procedure proposed by George Sandor, in 1964, compared to the more modern concurrent design procedure; axiomatic foundation and design rules (Reuleaux ...

There is no fixed machine design procedure for when the new machine element of the machine is being designed a number of options have to be considered. When designing machine one cannot apply rigid rules to get the best design for the machine at the lowest possible cost. The designer who develops the habit of following a fixed line of steps for designing the machine or machine elements cannot ...
