Person-centred, coordinated care enables people to make informed decisions that are right for them, and empowers them to self-care for their long term condition's in partnership with health and care professionals. A solution – The House of Care

NHS England » House of Care – a framework for long term ...

Self management will usually be used in relation to long-term, chronic health conditions while self care applies to acute illness or injuries. Self management is about coping with long-term health conditions, and managing the emotional and practical issues they present. Self care focuses more on treatment.

Self-care | Public Health | Royal College of Nursing

Post-acute covid-19 ("long covid") seems to be a multisystem disease, sometimes occurring after a relatively mild acute illness. 1 Clinical management requires a whole-patient perspective. 2 This article, intended for primary care clinicians, relates to the patient who has a delayed recovery from an episode of covid-19 that was managed in the community or in a standard hospital ward.

Management of post-acute covid-19 in primary care | The BMJ

Greenhalgh and Matthew Knight, a respiratory physician who ran a clinic for people recovering from long covid, coauthored a recent BMJ article on the management of post-acute covid-19 in primary care. 3 A major purpose of the paper, she said, was to reassure GPs that they have the clinical skills to manage these people, such as "listening to the patient, documenting what the symptoms are, how they change and how they fluctuate, and being alert to symptoms that might suggest they need referring."

Long covid: How to define it and how to manage it | The BMJ

Self-managing on a day-to-day basis is a key part of good diabetes care. Once diagnosed, people with diabetes and their families need support to come to terms with the condition. They also need to learn the skills that will allow them to take control, and which contribute to the long-term reduction in risks associated with diabetes.

Improving supported self-management for people with diabetes

Patients recovering from COVID-19 infection should speak to their GP about local care pathways for support and assessment of any long-term symptoms or health problems. Healthcare providers can also...
