Manatee Diagram

The skin of a manatee is very thick and it is wrinkled, similar to that of an elephant. This is why many people often mistake young manatees for older ones. They assume the wrinkled skin is a sign of aging but it is simply part of their overall anatomy. Many assume that the large sized manatee has blubber like seals and whales.

Labels for the manatee and calf version are calf, eyes, flippers, lips, mother, nostrils, and tail. This parts-of-a-manatee diagram resource makes a wonderful companion to National Geographic Readers: Manatees by Laura Marsh and many other manatee-related books. Be sure to download the preview for a closer look.-----

Label a Manatee Diagram - Parts of a Manatee Labeling ...

The manatee has a unique look that differentiates it from other mammals. The body of a manatee is very large, and they can weigh from 440 to 1,200 pounds. The overall size depends on several factors including their location, vegetation that is part of their diet, species, and gender. The females are larger and heavier than the males.

Manatee Anatomy - Animal Facts and Information

Manatee, any of three species of large slow aquatic mammals found along tropical and subtropical Atlantic coasts and associated inland waters, including the watersheds of the Amazon and Niger rivers. Dull gray, blackish, or brown in color, all three species have stout tapered bodies ending in a flat rounded tail.

manatee | Diet, Habitat, & Facts | Britannica

Manatees are usually seen alone, in pairs, or in small groups of a half dozen or fewer animals. From above the water's surface, the animal's nose and nostrils are often the only thing visible.

Manatees | National Geographic

Manatees have a small life cycle, but they go through a lot to become a father or a mother. When the calf is about to be born, the mother lays on her back so the manatee can come out. A born calf will weigh up to 60 pounds and is 4 feet long; the calf already knows how to swim. In the beginning of his birth, the mom w

The Life Cycle of Manatees

Manatees are believed to have evolved from a wading, plant-eating animal. The West Indian manatee is related to the West African manatee, the Amazonian manatee, the dugong, and Steller's sea cow, which was hunted to extinction in 1768. The average adult manatee is about 10 feet long and weighs between 800 and 1,200 pounds.

Manatee Facts - Save the Manatee Club

Manatees, like their elephant relatives, continuously replace their teeth throughout their lives with the older teeth at the front falling out and new teeth growing in at the back of their mouth. 9.
