In mathematics, the Kronecker product, sometimes denoted by  $\otimes$ , is an operation on two matrices of arbitrary size resulting in a block matrix. It is a generalization of the outer product from vectors to matrices, and gives the matrix of the tensor product with respect to a standard choice of basis. The Kronecker product is to be distinguished from the usual matrix multiplication, which is an entirely different operation. The Kronecker product is also sometimes called matrix direct product ...

The commutation matrix  $K_{m,n}$ , (Magnus & Neudecker, 1979) is the  $mn \times mn$  matrix which transforms  $\text{vec } A$  into  $\text{vec } A'$ :  $K_{m,n} \text{vec } A = \text{vec } A'$ . (1)  $A * B$  denotes the Hadamard product  $(a,b)$ , and  $A @ B$  denotes the Kronecker product  $(a \otimes b)$ . It is easy to see that  $\text{vec } a'b' = b @ a$  (2) for any two column-vectors  $a$  and  $b$ .

### Matrix Calculus and Kronecker Product with Applications ...

The algebra of the Kronecker products of matrices is recapitulated using a notation that reveals the tensor structures of the matrices. It is claimed that many of the difficulties that are encountered in working with the algebra can be alleviated by paying close attention to the indices that are concealed beneath the conventional matrix notation.
