The origin of a muscle is the point at which a muscle is attached to a fixed bone, while the insertion of a muscle is the point at which a muscle is attached to a bone moved by that muscle. All voluntary muscles have an origin and insertion. An example is the bicep, which originates at the scapula and inserts at the radial tuberosity on the radius.

What Is Meant by the Origin and Insertion of Muscles?

Usually, the origin is the end that doesn't move when the contraction occurs, and the insertion is the opposite end of the muscle that moves. Usually, the insertion—the moveable piece—is furthest from the body. We use the terms proximal and distal to denote closer or further away.
