Of Populations

Lab

Some of the controls acting on populations are: □ the amount of food and water available to feed the population □ the amount of nesting sites available to support raising young □ the size of the predator

Bookmark File

PDF Natural

population □ the amount of disease and parasites infecting the population Because of these limitations a certain area can only support a certain size population of each type of organism.

foods. However, the initial populations of birds are the same.

Therefore, at the end, you can compare generation three for each food situation and measure the effect of the food change.
