What you need to know about the science of nutrition. According to Medical News Today, nutrition is defined as “the study of nutrients in food, how the body uses nutrients, and the relationship between diet, health, and disease”. 4 All living beings, or organisms and cells, depend on nutrition in order to stay alive. More specifically, the human body requires six classes of nutrients.

Nutrition is how food affects the health of the body. Food is essential—it provides vital nutrients for survival, and helps the body function and stay healthy. Food is comprised of macronutrients including protein, carbohydrate and fat that not only offer calories to fuel the body and give it energy but play specific roles in maintaining health.

## ~~How to Explain Basic Nutrition Concepts~~

Theory of Nutrition Food is the essence and the first condition of life. Not surprisingly, all the universal natural science concepts have been including the theory of nutrition as their important and essential part. In the history of science there were two theories of nutrition.

## ~~Theory of nutrition—Spiral Journey~~

CHANGING CONCEPTS OF NUTRITION • During recent years the science of nutrition has extended to Nutritional epidemiology. • The old concept of “the health sector alone is responsible for all nutritional problems” is now realized that a broad multi factorial and integrated approach of sectors is essential to solve today’s nutritional problems.
