...

These are covered in operating system design and implementation. Operating System Design Goals. It is quite complicated to define all the goals and specifications of the operating system while designing it. The design changes depending on the type of the operating system i.e if it is batch system, time shared system, single user system, multi user system, distributed system etc. There are basically two types of goals while

Thanks to those who joined us in Broomfield, CO for the 11th USENIX Symposium on Operating Systems Design and Implementation (OSDI '14). As part of our commitment to open access, the proceedings, audio and video recordings, and available presentation slides from the Symposium are now free and openly accessible via the technical sessions Web page. The conference reports from ;login: are also online.

Operating systems have to deal with potentially hostile users: Security and privacy are two main factors that users prefer when it comes to a good operating system. There can be hostile users who may steal user programs or even hi-jack machines. Operating system designs have to incorporate these aspects in to their design process as well.
