These 6 ordering principles include axis, symmetry, hierarchy, datum, rhythm, repetition, and transformation. When experiencing forms and spaces in a building, you can be assured that at least one, if not all of these ordering principles were employed by the building designer. These principles form part of a larger order of architectural composition seen in most buildings throughout the world.

Centralized Organization. A central organization is composed of a dominant central space, with secondary spaces grouped around it. As a composition, this arrangement is concentrated and stable. The central space is usually regular in form and large enough to gather smaller spaces about its perimeter.

Spatial Organization in Architecture | Your Own Architect

From Ordering Space: Types in Architecture and Design (1994) Anne Vernez Moudon Sk. Schematic representation of the typological process of residential buildings at three scales - building type, building tissue, urban fabric. The diachronic process is the mutation of the leading type and occurs in a sequence of phases. In the figure below, for every

Space Types. There are many different types of spaces in a building, and each type of space has its own characteristics and requirements. This section of the WBDG provides information and guidance organized by functional space types, which complements the WBDG Building Types pages. For each Space Types page there is a discussion of the general attributes and requirements of the space as well as example configurations, layouts, and construction criteria.

Space Types | WBDG – Whole Building Design Guide

Francis D. K. Ching, Architecture Form, Space And Order...

The Ordering Principles of Architecture. In the last two classes, Professor Huang described the six ordering principles that are found in architectural design. These principles are axis, symmetry, hierarchy, rhythm, datum and transformation. Most architecture will generally include several of these design elements, although some of them may be more prominent than others.

The Ordering Principles of Architecture – jennifermundy

Space and mass are the raw materials of architectural form; from them the architect creates an ordered expression through the process of composition. Composition is the organization of the whole out of its parts—the conception of single elements, the interrelating of these elements, and the relating of them to the total form.

Architecture – Space and mass | Britannica

Space, based on its English lexical concepts, can be classified into three types of geographical space, living space and (interior or central) architectural space . Bruno Zevi [6] considered space as the basis of architecture which architecture obtains its characteristics based on it.
