The Chemical World Chemistry: The science that seeks to understand what matter does by studying what atoms and molecules do. Virtually everything around you is composed of chemicals. Atoms and Molecules in Matter Atoms are very small. Atoms and molecules are tiny particles that compose all common matter.

Chemistry Concepts: Energy Levels and Orbitals A lot of chemistry is explained by the sharing and trading of electrons between atoms. Understanding how electrons are arranged in an atom is a building block of Chem I. Electrons in an atom are contained in specific energy levels (1, 2, 3, and so on) that are different distances from the nucleus.
