...

1) Confirm that the gauge indicator is still in the green zone (i.e., 120-150 mmHg). 2) Completely immerse the entire endoscope in clean water. 3) Completely observe the instrument carefully while fully angulating the distal tip of the endoscope. A few bubbles may occur initially from recessed areas of the endoscope.

Reprocessing Training Evaluation Checklist - Pentax

1. Thoroughly pre-clean at bedside. 2. Be sure all scopes begin the reprocessing process within 30 minutes of use. 3. If a scope goes longer than 30 minutes without reprocessing, develop a special set of procedures for more thoroughly cleaning these scopes, and adopt a method for verifying their proper cleaning. 4. Clean all channels of the scope, not just the biopsy and suction channels.

S206-R00 E ED-3490TK USA Ope - Pentax
Reprocessing Guidelines for Pentax GI Endoscopes 1. Pre-cleaning (in examination room) 2. Leak Testing (in reprocessing area) 3. Cleaning 4. High-Level Disinfection 5. After HLD (in reprocessing area) (reproc area) Prepare for storage and inspect before reuse
MANUAL PRE-CLEANING
Immediately after the procedure: Wipe insertion tube

Reprocessing Of Pentax Endoscopes [34wm62odkwl7]
Meticulous physical cleaning must always precede disinfection and sterilization procedures, because inorganic and organic materials that remain on the surfaces of instruments interfere with the effectiveness of these processes.¹⁸ Mechanical cleaning alone reduces microbial counts by approximately 10³ to 10⁶ (three to six logs), equivalent to a 99.9% to 99.9999% reduction in microbial burden.^{19, 20, 21, 22, 23, 24, 25, 26}
