$X = Y = Z/2$ . 3. An object hanged on a rope  $L=0,5m$ , does rotational motion. If the angle between rope and vertical is  $37^\circ$ , find the tangential velocity of the object. ( $g=10m/s^2$ ,  $\cos 37^\circ = 0,8$ ,  $\sin 37^\circ = 0,6$ ) Free body diagram of system is given below; Horizontal component of tension on the rope makes object rotate.

Rotational motion of a rigid body around a fixed axis is a special case of rotational motion. During rotational motion there is also a possibility of axis changing its orientation. We can not explain the concepts of wobbling or precession by using fixed axis hypothesis for rotational motion. Here in this article about rotational motion I
