### ~~Ping Basic Ip Network Troubleshooting Need To Know Basis~~

Troubleshooting IP Problems. In the TCP/IP protocol suite, if we are not able to reach at the destination IP address and not able to find the route to reach the next hop at any point in the network, then we will use PING and TRACEROUTE tools for troubleshooting the cause and location of the issue. The generic steps to troubleshoot the IP related issues in the network include:

### ~~Basic Network Troubleshooting Steps and Tools~~

I See A Wide Range Of Ping Times - If the ping tests come back with inconsistent results, such as ranging from 5ms to 300ms ping times, it would be a good idea to reach out to your ISP (Internet Service Provider) to confirm that they are not seeing any issues on their end that could be causing the jitter. It is also possible that this jitter can be caused from internal network congestion.

I've written this guide on the most common network troubleshooting techniques, best practices, and recommended my favorite network performance monitoring tool you can use to give you a starting point and structure for efficiently resolving network issues as they arise as well as proactively prevent them. I'll be using a bit of technical jargon here, but I'll explain the key terms and ...

### ~~Network Troubleshooting: Steps, Techniques, & Best~~

At the command prompt, ping the loopback address by typing ping 127.0.0.1; Ping the IP address of the computer. Ping the IP address of the default gateway. If the ping command fails, verify that the default gateway IP address is correct and that the gateway (router) is operational. Ping the IP address of a remote host (a host that is on a different subnet).

### ~~Basic Networking Commands Explained with Examples~~

Ping is likely the number one utility that every tech pro will use on a daily basis. It helps us to determine two things: latency and packet loss. Because ICMP is typically the lowest priority packet in the pecking order, it doesn't tell us what the problem is. Instead, it tells us that there is a problem that needs to be addressed.

### ~~Best Network Troubleshooting Tools for IP Pros~~

The ping command is one of the most often used networking utilities for detecting devices on a network and for troubleshooting network problems. When you ping a device you send that device a short message, which it then sends back (the echo). The general format is ping hostname or ping IPaddress. Example. ping www.google.com or ping 216.58.208.68
