Poisonous plants - PDSA

Poisonous plants are plants that produce toxins that deter herbivores from consuming them. Plants cannot move to escape their predators, so they must have other means of protecting themselves from herbivorous animals. Some plants have physical defenses such as thorns, spines and prickles, but by far the most common type of protection is chemical.

List of poisonous plants - Wikipedia

On many ranges, poisonous plants are a normal but small part of the animal's diet as they are highly nutritious, i.e., larkspurs, locoweeds, and lupines, to name a few. Poisonous plant problems are often exacerbated during periods of below normal rainfall when the abundance of grasses is reduced.
