Only because Cnidaria and Porifera are phyla with small bodied organisms, it does not mean that they are closely related.

Cnidarians and poriferans are mostly marine animals, but some are found in freshwater, as well. There are many differences exhibited between cnidarians and poriferans discussed in this article.

7 Porifera, Cnidaria, Ctenophora 7.1

Animals Animals are eukaryotic, multicellular organisms that form the biological kingdom Animalia. With few exceptions, animals are motile (able to move), heterotrophic (consume organic material), reproduce sexually, and their embryonic development includes a blastula stage.

Pacific sea nettles, *Chrysaora fuscescens*.

Cnidaria (/ na d ri /) is a

phylum under kingdom Animalia

containing over 11,000 species of aquatic

animals found both in freshwater and

marine environments, predominantly the

latter. Their distinguishing feature is

cnidocytes, specialized cells that they use

mainly for capturing prey.

Cnidaria - Wikipedia

The Placozoa / p l æ k z o / are

a basal form of marine free-living (non-

parasitic) multicellular organism. They are

the simplest in structure of all animals. Three

genera have been found: the classical

Trichoplax adhaerens, *Hoilungia*

hongkongensis, and *Polyplacotoma*

mediterranea, where the last appears most

basal. The last two have been found only

since 2017.
