MDX queries can have 0, 1, 2 or up to 128 query axes in the SELECT statement. Each axis behaves in exactly the same way, unlike SQL where there are significant differences between how the rows and the columns of a query behave. As with an SQL query, the FROM clause names the source of the data for the MDX query.

Microsoft SQL Server is an enterprise database platform that contains  
a multitude of technologies, Analysis Services being one of them. SQL  
Server Analysis Services (SSAS) provides OLAP and data mining  
capabilities and allows users to analyze multidimensional data stored  
in cubes using the MDX query language.
