~~Predictive Health: How We Can Reinvent Medicine to Extend~~

The current interest in predictive analytics for improving health care is reflected by a surge in long-term investment in developing new technologies using artificial intelligence and machine learning to forecast future events (possibly in real time) to improve the health of individuals. Predictive algorithms or clinical prediction models, as they have historically been called, help identify individuals at increased likelihood of disease for diagnosis and prognosis (see Supplementary ...

The researchers, as well as doctors, can benefit from predictive analytics to see what can happen. Here is a simplified process: Descriptive analytics algorithms are the first to the scene. They take the incoming data from electronic health record and present it in an understandable format. The information includes clinical documentation, claims data, patient surveys, lab tests and so on - everything that already happened.

~~What is Predictive Analytics in Healthcare? (4 Use Cases)~~

Predictive Health Partners supports this article published by The American Health Policy Institute. Healthcare plan fiduciaries certainly do have the "unfettered right to access, analyze, and compare health servicing provider pricing, network fee arrangements, and quality data, and to communicate that information to stimulate competition".
