Quality control typically deals with issues such as acceptance testing and preventive maintenance of imaging equipment, the evaluation of shielding around x-ray facilities; and measurement of processing parameters like developer temperature, developer pH, base and fog, speed, and contrast.

Quality Management in Radiology: Defining the Parameters ...

The field of quality management, including performance improvement and patient safety, is characterised by a host of confusing and overlapping terminologies. In essence, a variety of processes can be introduced to monitor quality (quality control) and safety (risk management) under a departmental umbrella (quality assurance) that serves as a cog in the larger institutional culture of safety (total quality management).
