those looking to record a building. < < Contents 1 . 1 Figure 1: Apethorpe, Northamptonshire. Understanding historic buildings can involve unravelling highly complex phased fabric. Here various phases of construction are revealed during stripping back of later wall coverings.

~~Understanding Historic Buildings~~

The Craft Of Timber Framing. Timber framing is just the kind of traditional craft that we at Hearthstone specialize in. Meticulously practiced for centuries as the preferred method of building construction, the trade and tradition nearly died in the early 1900's as steel mills, high-production saw mills, wire nails, and mass production psychology replaced the art and craft of timber framing ...

The Smaller Brick, Stone and Weatherboard Houses of Surrey, 17th to mid 19th Century: A Statistical Analysis by George Howard. Domestic Buildings Research Group (Surrey).

~~RECORDING KEY BUILDING FEATURES: AN ILLUSTRATED GLOSSARY~~

Jettying is a building technique used in medieval timber-frame buildings in which an upper floor projects beyond the dimensions of the floor below. This has the advantage of increasing the available space in the building without obstructing the street. Jettied floors are also termed jetties. In the U.S., the most common surviving colonial version of this is the garrison house. Most jetties are external, but some early medieval houses were built with internal jetties.

A crown post is a term in traditional timber framing for a post in roof framing which stands on a tie beam or collar beam and supports a collar plate. Historically, crown posts were called king posts, but this usage is confusing and obsolete.A crown post is designed to be in a compression and transfers weight to the tie beam, where a king post is designed to be in tension and supports the tie ...
