CentOS is a fork of Red Hat, meaning it has many similarities with RHEL 8.x, and is based on Red Hat's code. CentOS is the "community version" of RHEL and is functionally compatible with its upstream sibling. As a result, CentOS may receive updates slower as RedHat ("upstream") has to release the update first. Like RHEL 8, the CentOS 8 distribution is also useful for enterprise and management. Unlike Red Hat, however, CentOS 8 is free.

Red Hat does not make a compiled version of its Enterprise Linux product available for free download. However, as the license terms on which it is mostly based explicitly stipulate, Red Hat has made the entire source code available in RPM format via their network of servers. The availability of the complete source code of the distribution in RPM format makes it relatively easy to recompile the entire distribution.
