Sencha Touch was originally developed with support for WebKit only (Android, iOS) would remain separate from the desktop framework until they were unified in version Ext JS 6.0. It's important to note that here, Sencha expanded its engineering team by acquiring technologies like jQTTouch, Raphael JS and a few other open source technologies.

The rise and fall of Ext JS | Hacker Noon

assigning margin / padding to the css class .layout-panel screws up the size of the ContentPanel, since ContentPanel::setSize() doesn't take it into account. the result is offset content and scrollbars. would it make sense to be able to assign margin/padding to teh ContentPanel constructor. the alternative is to use container divs.
