A special right triangle is a right triangle with some regular feature that makes calculations on the triangle easier, or for which simple formulas exist. For example, a right triangle may have angles that form simple relationships, such as $45^\circ-45^\circ-90^\circ$.

Two very special right triangle relationships will continually appear throughout the study of mathematics: In an isosceles right triangle, the angle measures are $45^\circ-45^\circ-90^\circ$, and the side lengths create a ratio where the measure of the hypotenuse is $\sqrt{2}$ times the measure of each leg as seen in the diagram below.

A special right triangle is a right triangle with some regular feature that makes calculations on the triangle easier, or for which simple formulas exist. For example, a right triangle may have angles that form simple relationships, such as $45^\circ-45^\circ-90^\circ$. This is called an "angle-based" right triangle. A "side-based" right triangle is one in which the lengths of the sides form ratios of whole numbers, such as 3: 4: 5, or of other special numbers such as the golden ratio. Knowing the ...

Special Right Triangles

An acute angle of a triangle is an angle between 0 and 90 . A right angle is a 90 angle. Complementary angles add up to 90 . Supplementary angles add up to 180 . An equilateral triangle is a triangle with equal sides and equal angles. An isosceles triangle is a triangle with two equal sides. 30-60-90 Triangles 45-45-90 Triangles
