the Machine Learning Quick Reference Guide. Search Processing Language A Splunk search is a series of commands and arguments. Commands are chained together with a pipe “|” character to indicate that the output of one command feeds into the next command on the right. `search | command1 arguments1 | command2 arguments2 | ...`

Concepts Additional Features - Splunk

Refining Search Results. We can further refine the search result by selecting a string and adding it to the search. In the below example, we click over the string 3351 and select the option Add to Search. After 3351 is added to the search term, we get the below result which shows only those lines from the log containing 3351 in them. Also mark how the time line of the search result has changed as we have refined the search.
