Simple Manual Star Delta Starter The following image shows the connection diagram of a simple manual Star Delta Starter. The switch in this starter has three positions: 0 (for OFF), 1 (for Star) and 2 (for Delta). If the switch is placed in 0 - position, the windings of the motor are open and the motor is OFF.

Star Delta Starter for 3-Phase Motor  
It is Important the pause between star contactor switch off and Delta contactor switch is on correct. This is because Star contactor must be reliably disconnected before Delta contactor is activated. It is also important that the switch over pause is not too long. For 415v Star Connection voltage is effectively reduced to 58% or 240v.

Both devices are used to start induction motors however, where partial voltage is applied to each winding of a star delta starter, a DOL has 100% voltage applied. This also applies to the current, a star delta uses one-third of the starting current that a DOL does.

The SD1-S unit is a star/delta switch designed for use with three-phase star/delta motors. Speed change is approximately in the ratio of 1.3:1 and the power saving is up to 50%. The unit is a simple switch and does not provide any protection to the motor.

The starter mainly consists of a TPDP switch which stands for Tripple Pole Double Throw switch. This switch changes stator winding from star to delta. During starting condition stator winding is connected in the form of a star. Now we shall see how a star delta starter reduces the starting current of a three-phase induction motor.

Star Delta Starter: What is it? (Working Principle ...  
The starting current is 33% of full load current for star delta starter. The peak starting torque is 33% of full load torque. The peak starting current is 1.3 to 2.6 of full load current. Star-Delta Starter can be used only for low to high power three phase induction motors.

Star Delta Starter - (Y-?) Starter Power, Control & Wiring ...  
A star delta is used for a cage motor designed to run normally on the delta connected stator winding. The connection of a three-phase induction motor with a star delta starter is shown in the figure below. When the switch S is in the START position, the stator windings are connected in the star as shown below.
