Technological Transitions And System Innovations A Co ...

'Technological innovations have occurred throughout history and rapidly increased over the modern age. New technologies are developed and co-exist with the old before supplanting them. Transport offers several examples; from sailing to steam ships to automobiles replacing horse-based transportation. Technological transitions describe how these technological innovations occur and are incorporated into society. Alongside the technological developments TT considers wider societal changes such ...

---

Technological Transitions And System Innovations: A Co ...

System innovation is defined as “a transition from one socio-technical system to another (Geels, 2005, p.2)”. Some historical examples of system innovation are the transition from sailing ships to steam ships, the transition from horse-and-carriage to automobiles, and the transition from piston engine aircrafts to jetliners in American aviation (Geels, 2002a, 2002b, 2005).

The retrospective study of the conditions for success or failure of innovation trajectories, and the multi-level framework helps to understand transition dynamics.

---

An assessment method for system innovation and Technological innovation systems and the multi-level framework are closely related concepts for the study of far-reaching technological change. They draw on common theoretical roots and analyze similar empirical phenomena. However, they have developed rather independent research strands over the past few years.

...

Technological innovation is the economic function through which new technologies are introduced into production and consumption. It entails recognizing new technological possibilities, organizing the human and financial resources needed to transform them into useful products and processes, and sustaining the requisite activities.
