Selenium is an essential trace element related to sulphur. It has a similar chemistry as sulphur and forms a range of organo-selenium compounds. It also is an important element in modern day electronics as it can be a semi-conductor. It is essential for humans in form of selenocysteine, which forms the catalytic centre in a number of enzymes.

Sulfur, Selenium, Tellurium and Polonium deals with the chemistry of sulfur, selenium, tellurium, and polonium. The history, occurrence and distribution, and production of all four elements are discussed, along with their industrial uses, purification, and allotropy; nuclear, physical, and chemical properties; and biological activities.

Tellurium (Te), semimetallic chemical element in the oxygen group (Group 16 [VIA] of the periodic table), closely allied with the element selenium in chemical and physical properties. Tellurium is a silvery white element with properties intermediate between those of metals and nonmetals; it makes up approximately one part per billion of Earth's crust .

## **Tellurium | chemical element | Britannica**

Tellurium is a semimetallic, lustrous, crystalline, brittle, silver-white element. It is usually available as a dark grey powder and has metal and non-metal properties. Te forms many compounds corresponding to those of sulfur and selenium. When burned in the air tellurium has a greenish-blue flame and forms tellurium dioxide as a result.

### **Chemistry of Tellurium (Z=52) - Chemistry LibreTexts**

Tellurium is a chemical element with the symbol Te and atomic number 52. It is a brittle, mildly toxic, rare, silver-white metalloid. Tellurium is chemically related to selenium and sulfur, all three of which are chalcogens. It is occasionally found in native form as elemental crystals.

Coordination chemistry of selenium or tellurium polycations is almost unknown, yet a few examples exist.

Direct reaction of chalcogen polycations with metal carbonyls yielded complexes  $[(\text{Se}^{2+})\text{FeW}(\text{CO})_8]^{2+}$ ,  $[(\text{Te}^{3+})\text{Mo}(\text{CO})_4]^{2+}$  and  $[(\text{Se}^{4+})\text{W}_2(\text{CO})_{10}]^{2+}$  with homonuclear units that were formulated as cations  $\text{Se}^{2+}$ ,  $\text{Te}^{3+}$  and  $(\text{Se}^{2+})_2$ , although the ascribed distribution of charge may be questioned [102], [103].
