These mollusks have no heads, and their bodies consist entirely of a wedge-shaped "foot." Gastropods are the most diverse family of mollusks, including over 60,000 species of snails and slugs that live in marine, freshwater, and terrestrial habitats. Cephalopods, the most advanced mollusks, include octopuses, squids, cuttlefish, and nautilus. Most of the members of this group either lack shells, or have small internal shells.

Marine biogeography, the study of the spatial distribution of organisms in the world's oceans, is one of the most fascinating branches of oceanography. This book continues the pioneering research into the distributions of molluscan faunas, first studied by biologists over 160 years ago. It illustrates 1778 species of gastropods in full color, many of which are extremely rare and poorly known endemic species that are illustrated for the first time outside of their original descriptions.
