The Peanut Allergy Epidemic Whats Causing It And How To ...

Peanut allergy is a type of food allergy to peanuts. It is different from tree nut allergies, with peanuts being legumes and not true nuts. Physical symptoms of allergic reaction can include itchiness, hives, swelling, eczema, sneezing, asthma attack, abdominal pain, drop in blood pressure, diarrhea, and cardiac arrest. Anaphylaxis may occur. Those with a history of asthma are more likely to be severely affected. It is due to a type I hypersensitivity reaction of the immune system in susceptible

Peanut allergy - Wikipedia

Michelle Berriedale-Johnson reviews Heather Fraser's shocking new book which suggests that the peanut allergy epidemic, which has seen a ten-fold increase in the incidence of peanut allergy in children over the last 12 years, was a disaster waiting to happen, which could have been foreseen by anyone studying the medical literature on injection, vaccination and allergy.
