capacity to control mental images may be preserved in the face of psy-chopathology. In the present study, we examine the relation of image con-trol to the physiological reaction of PTSD and non-PTSD participants under two tasks. These tasks involve the manipulation of mental imagery:

The Function of Image Control in the Psychophysiology of ...

Abstract Psychophysiological response to fear memory imagery was assessed in speci?c phobia, social anxiety disorder, panic disorder with agoraphobia, post-traumatic stress disorder (PTSD), and healthy controls. Heart rate, skin conductance, and corrugator muscle were recorded as participants responded to tone cues signaling previously memorized descriptor sentences.

The psychophysiology of anxiety disorder: Fear memory imagery

Hence it can be the psychological component that triggers the stress response. If a person perceives that they are in threatening situations that they are unable to cope with, then messages are carried along neurones from the cerebral cortex (where the thought processes occur) and the limbic system to the Hypothalamus.
