This book provides the most up-to-date review of the simian virus 40 (SV40) minichromosome as a model for the mammalian chromosome in studies of DNA replication. It focuses on disruption of DNA replication by anticancer drugs and DNA-damaging agents.

The SV40 Replicon Model for Analysis of Anticancer Drugs ...

Like most prokaryotic genomes, the SV40 genome is a circular duplex DNA organized in a single replicon. This small viral genome, its association with host histones in nucleosomes, and its dependence on the host cell milieu for replication factors and precursors led to its adoption as a simple and powerful model.

SV40 DNA replication: From the A gene to a nanomachine ...

The replicon model, originally formulated by F. Jacob in 1963 based on studies on bacterial (*Escherichia coli*) cells, predicts that replication of a chromosome occurs in discrete units called replicons.
