1). Tocotrienols are the primary form of vitamin E in the seed endosperm of most monocots, including agronomically important cereal grains such as wheat, rice, and barley.

Tocotrienols: Vitamin E beyond tocopherols. -
Abstract ...

Vitamin E is a group of eight nutrients with two

Online Library

Tocotrienols

major subgroups, four tocopherols and four tocotrienols. Each tocopherol or tocotrienol molecule has a “ head ” section and a “ tail ” section. The heads are of four types, alpha-, beta-, gamma-, or delta-, with the tocopherols and tocotrienols having the same set of heads. It is the tail that determines

CoQ10 is just too long to fit in naturally as vitamin E does, because vitamin E is half the width of the membrane. When one takes fish oil they should be taking it with tocotrienols, as this helps shield the fat from oxidization, also protecting it when it becomes nestled within the cellular membrane.
