Tropical disease, any disease that is indigenous to tropical or subtropical areas of the world or that occurs principally in those areas. Examples of tropical diseases include malaria, cholera, Chagas disease, yellow fever, and dengue.. Historical overview of tropical diseases. Diseases of the tropics and subtropics have been known since ancient times.

Tropical disease | Britannica

Tropical diseases are diseases that are prevalent in or unique to tropical and subtropical regions. The diseases are less prevalent in temperate climates, due in part to the occurrence of a cold season, which controls the insect population by forcing hibernation. However, many were present in northern Europe and northern America in the 17th and 18th centuries before modern understanding of ...

Symptoms of neglected tropical diseases (NTDs) vary dramatically from disease to disease. Some immediately present symptoms such as fever, aches, rash, sores, or swelling of the lymph nodes or at the site of infection. Some NTDs, such as sleeping sickness, leprosy, and guinea-worm disease, may not present symptoms for one or several years.

A team has demonstrated for the first time that cannabidiol induces the expression of heme oxygenase 1, an enzyme with antioxidant and anti-inflammatory properties, in the main cells on the top layer of the skin, called keratinocytes. They found that this is done by reducing or silencing the protein known as BACH1.
