The contributions of cytology and fine needle aspiration biopsy in diagnosis are emphasized, particularly with respect to adrenal tumors. Emphasis is also placed on the important role of molecular pathology and immunohistochemistry in tumor diagnosis, and in some cases may provide valuable information regarding prognosis.

Tumors of the Adrenal Glands and Extraadrenal Paraganglia ...

AFIP Atlas of Tumor Pathology: Adrenal Gland & Extra-adrenal Paraganglia. This Fascicle follows in the wake of the third series Fascicle published in 1997 and two separate sets of second series Fascicles, Tumors of the Extra-adrenal Paraganglion System and Tumors of the Adrenal. In order to attain a better understanding of the varied morphology of neoplasms of the adrenal cortex, medulla and extraadrenal paraganglia, structural aspects of normal anatomy, including hyperplasia, are illustrated.

Tumor Pathology: Adrenal Gland & Extra-adrenal Paraganglia

Adrenal tumors are cancerous or noncancerous growths on the adrenal glands. The cause of most adrenal tumors is unknown. Risk factors for adrenal tumors can include Carney complex, Li-Fraumeni syndrome, multiple endocrine neoplasia type 2 and neurofibromatosis type 1. Adrenal tumors may be removed surgically.

Adrenal Tumors: Signs, Symptoms, Treatments & Complications

An adrenal tumor or adrenal mass is any benign or malignant neoplasms of the adrenal gland, several of which are notable for their tendency to overproduce endocrine hormones. Adrenal cancer is the presence of malignant adrenal tumors, and includes neuroblastoma, adrenocortical carcinoma and some adrenal pheochromocytomas.Most adrenal pheochromocytomas and all adrenocortical adenomas are benign ...

Tumors Adrenal Atlas Tumor Pathology

The Pathology Atlas contains mRNA and protein expression data from 17 different forms of human cancer. Correlation analyses based on mRNA expression levels of human genes in cancer tissue and the clinical outcome for almost 8000 cancer patients is presented in a gene-centric manner, including more than 18000 Kaplan-Meier plots with high significance (p<0.001).

The human pathology proteome - The Human Protein Atlas

It's not clear what causes adrenal cancer. Adrenal cancer forms when something creates changes (mutations) in the DNA of an adrenal gland cell. A cell's DNA contains the instructions that tell a cell what to do. The mutations can tell the cell to multiply uncontrollably and to continue living when healthy cells would die. When this happens, the abnormal cells accumulate and form a tumor.

Tumor Type . Tumors of the adrenal medulla (eg, pheochromocytoma) Pediatric adrenal cortical tumors or neoplasms of uncertain malignant potential ( 18 years) # Sarcoma (consider the Soft Tissue protocol) Lymphoma (consider the Hodgkin or non-Hodgkin Lymphoma protocols) # This protocol applies ONLY to adrenal carcinomas in all age groups.

CAP Cancer Protocol Adrenal Gland

Adrenal cancer patients interact with many doctors during the course of their treatment, but rarely do they meet the specialist who plays a critical role in the outcome: the pathologist who diagnoses their cancer by analyzing samples of blood, tissue and body fluid. Precise diagnosis is what drives patient decisions and therapy.
