--

After pollination has occurred, the Page 23/41

flowers transform into fruiting bodies. which protect the numerous seeds that are inside. As the seeds mature or ripen, the flowers will eventually fade away or drop. Once the seeds have dried, they are ready to be planted , repeating the life cycle of a flowering

plant all over again.
During the seed life cycle, you may want to discuss various ways seeds are dispersed, or spread, as well.

...

All flowering plants have a welldeveloped vascular system, meaning Page 27/41

they bear xylem and phloem for absorption of nutrition and water. The collected water is distributed to all parts of the plant. On the other hand, some of the nonflowering plants are devoid of this internal system for absorbing water and supplying it to other Page 28/41 Where To Download partserstanding

he Flowerin Flowering Plants Vs. Non-flowering Plants - Gardenerdy Flowering plants need about 12 hours of light and the kind of lighting that they need is towards the redend of the spectrum (warm lighting). Air Circulation – A Page 29/41

properairanding circulation is critical for the plants, especially at the flowering stage. While it brings in a fresh supply of oxygen and other elements that the plants need, another great thing that having a steady breeze does is that it ensures that Page 30/41

temperaturesding remain coolering
