Validation of microbial recovery from disinfectants

Microbial Recovery concerns itself with in-coming raw materials whether chemicals or containers, in-process products, Active Pharmaceutical Ingredients (API), or finished product. Microbial Recovery is also an important element of both HVAC and water utility systems.

Microbiological Aspects of Cleaning Validation

Method recovery. Culture based microbial validation is limited by the ability of microorganisms to reproduce under a set of conditions in relation to sample preparation, cultivation and incubation. Any method is, therefore, a general indicator only.

Abstract: The validation of surface-recovery methods is a pre-requisite for residual determination of cleaning effectiveness in process validation studies. These methods should be challenged in the laboratory using pilot-scale controlled conditions in order to evaluate the suitability for their intended use.
