Nurse Nightingale: Ventilators Explained Extremely Easy  
While modes have classically been divided up into pressure or volume controlled modes, a more modern approach describes ventilatory modes based on three characteristics □ the trigger (flow versus pressure), the limit (what determines the size of the breath), and the cycle (what actually ends the breath). In both VCV and PCV, time is the cycle, the difference being in how the time to cessation is determined.

### Modes of Mechanical Ventilation - Open Anesthesia

In this mode we set a certain pressure for the ventilator to achieve with each breath rather than a certain volume. So if the lung is very compliant, that is it only takes a small change in pressure to increase the volume in the lung, then the pressures set to achieve good tidal volumes will only have to be relatively low.
