~~Visual Perception and Cognition | Academic Flex~~

The ability to perceive our spatial surroundings is critical to tasks ranging from grasping nearby objects to complex navigation through an unfamiliar environment. Our group examines visual perception and spatial cognition with a multidisciplinary approach involving psychology and computer science in the service of both basic and applied research goals.

~~Visual Perception and Spatial Cognition | The University ...~~

Visual perception is the ability to interpret the surrounding environment using light in the visible spectrum reflected by the objects in the environment. This is different from visual acuity, which refers to how clearly a person sees (for example "20/20 vision"). A person can have problems with visual perceptual processing even if they have 20/20 vision.
