Psoriasis is a skin condition that causes red, flaky, crusty patches of skin covered with silvery scales. These patches normally appear on your elbows, knees, scalp and lower back, but can appear anywhere on your body. Most people are only affected with small patches. In some cases, the patches can be itchy or sore.

Psoriasis - NHS

Psoriasis is a chronic autoimmune condition that causes the rapid buildup of skin cells. This buildup of cells causes scaling on the skin ' s surface. Inflammation and redness around the scales is...

Psoriasis: Causes, Triggers, Treatment, and More

Psoriasis is an inflammatory immune condition that affects the skin and sometimes the joints. The name is derived from the Greek work psora, to itch. Those with psoriasis experience a rapid skin turnover, with cells taking just a few days to renew rather than the normal 21-28 days. This causes cells to accumulate on the surface of the skin which as a result become scaly, itchy and red.
