## ~~Zero Acceptance Number Sampling Plans, Fifth Edition ...~~

Description. This book provides a set of attribute plans for lot-by-lot inspection with the acceptance number in all cases as zero. After years of extensive application by government contractors, commercial manufacturing, and service industries, these  $c=0$  sampling plans are now considered stand alone sampling plans. They have continually gained in popularity for more than 45 years, and today are the norm.

~~Zero Acceptance Number Sampling Plans, Fifth Edition | ASQ~~

The zero acceptance number ( $c = 0$ ) sampling plan requires far less inspection than the corresponding ANSI/ASQ Z1.4 (formerly MIL-STD 105) plan, and becomes viable when the supplier is extremely confident in its level of quality. 1. An ANSI/ASQ Z1.4 plan consists of a sample size  $n$ , and an acceptance number  $c$ .

151-280 (1% AQL), a sample size of 20 is provided. However, in the 5th edition, for the same lot size 151-280 and AQL of 1%, the sample size is 29.

### ~~Zero Acceptance Number Sampling Plans—ASQ~~

The use of sampling plans with zero acceptance numbers is the norm today. The sampling plans in this book ( $c=0$ ) actually represent a revision in 1963 of similar plans I developed in 1961. Because of the widespread use of MIL-STD-105C in 1961, the only way to depart from this standard was to develop a set of plans

In medical device manufacturing the key point is to have the plan accept on zero defectives. This point is not FDA but legalese. It is based on past lawsuits. The plan "Zero Acceptance Number Sampling Plans" by Nicholas L. Squeglia ( available from ASQ) has been widely adopted for this reason.

C = 0 Inspection Plans (Acceptance Number of 0):  
From a quality assurance point of view, however, in  
many industries the only acceptable publicized quality  
level is 0% defective parts. Obviously, the ideal AQL  
should be 0. You may have a difficult time explaining  
your final customers that a small proportion of  
defectives is still acceptable.

~~Number of 0~~

I have a question on zero acceptance sampling plans. They do not actually use AQL but rather the term 'Associated AQL'. In the sampling plans above it is my understanding that an AQL of 1% would indicate there is a 95% chance of a lot containing 1% or fewer defects would be accepted (or a 5% chance of the same lot being rejected - producer risk).

~~What is the AQL (Acceptance Quality Limit) in QC Inspections?~~

With the acceptance number set to zero, we have greater protection at the LQ level with a sample size of 18, as compared with a sampling plan from ANSI

Z1.4 that has a sample size of 125 with an acceptance number of 10. Now, let us compare a set of  $c=0$  plans from Table 1 with the previous ANSI Z1.4 example used.

### ~~Zero Acceptance Number Sampling Plans | Sampling~~

...

Acceptance sampling is used to assess the quality based on sample size, acceptance number, and desired quality level.  $C=0$  sampling plans are based on the premise of accepting the lot if zero defects are found during the inspection, and rejecting the lot if one or more defects are found during the inspection.
